

AI-Driven Multi-Vendor Network Security Compliance Auditor

SIH26155 • Architecture Document • Hackathon MVP

Technology stack

Frontend	React + Tailwind CSS	Backend	Python + FastAPI
Parsing	Rules / regex / vendor adapters	Local AI	scikit-learn • TF-IDF + linear classifier
Storage	SQLite + local files	Output	ReportLab + local HTML

Core rule: deterministic parsing and compliance rules are authoritative; local AI interprets unfamiliar syntax only. Uncertain or contradictory evidence becomes INCONCLUSIVE or requires human review.

Data Flow, Trust Boundary & Governance

Minimal flow designed to make the project's differentiator visible to an evaluator.
